

PLAYGROUNDS FOR ALL GENERATIONS

CATALOGUE

Bonita

Children's playgrounds | Workout playgrounds | Fitness machines | Street furniture | Impact surfaces

Dear customers,

We present the new product catalogue of our company Bonita Group Service s.r.o., where you can find a complete range of play elements and sets the construction, restoration or completion of playgrounds for all generations. We are a purely Czech company, we produce, deliver and install playgrounds and sets in the Czech Republic and around the world for more than 13 years. At the same time we would like to thank for your confidence you showed us in past years and look forward to working together in the years to come.

Complete information and detailed description of play elements, ground plans, new products, special promotions etc. can be found on our website

www.playgrounds-bonita.com

WHY PLAYGROUNDS FROM US?

- Minimum maintenance of our products.
- Versatility and variability of play sets.
- Play elements are made of the finest materials and dimensioned to ensure maximum durability.
- We pay special attention to the safety of children when designing play elements.
- High quality workmanship.
- Play sets with lower platforms up to 1 m do not require expensive impact surface (pebbles, rubber, cast rubber, etc.).
- All-metal play elements are nearly maintenance free.

The main task of our company is reliability, on-time deliveries and high quality services. Reputation of our company is based on honest and respectable dealing with customers. Our concept is good work on the professional level and a happy customer coming back to us. We look forward to co-operation with you and believe that you will be satisfied with our work. Bonita Group Service s.r.o. team

ANTIVANDAL PROGRAMME

These are all-metal sets and elements that can be combined in various ways. These elements and sets are manufactured of high-quality materials that guarantee maximum durability and the highest possible quality-to-price ratio that is not the only advantage of the **ANTIVANDAL** programme.

All-metal play elements and sets have minimum maintenance requirements, they need not to be re-painted, they are rigid, stable, colour-fast and weather-proof. The most important advantage of these sets and elements is a resistance to vandalism and long service life. Individual components are rigid, very hard to damage and they can withstand the maximum load without any risk of breaking or bending. Therefore, even in case of inappropriate loading by persons the sets are not intended for, they can be hardly damaged. The **ANTIVANDAL** programme is suited for installation not only in places with a danger of misuse of children's play sets by bad risk people but also where they can serve well to those they are intended for.

ISO 9001 CERTIFICATE

REQUIRE NOT ONLY A CERTIFIED PLAYGROUND BUT ALSO A CERTIFIED SUPPLIER!

We are proud to announce that Bonita has been successfully certified for ISO 9001 Quality Management System. This is another step towards continuous improvement and maintaining excellent quality which has allowed us to provide joy for more than 13 years. ISO 9001 is a standard used to set up proper management processes in an organization to help to continuously improve the quality of products and services, and improve customer satisfaction.

PLAY SETS

Play sets offer active entertainment to children while developing their basic motor skills. Children's playgrounds can be built in all types of schools and relaxation zones, recreation areas, housing estates, outdoor swimming pools and family gardens as well. Play sets can be arranged at investor's request with regard to the space size, age of future users etc.

CHILD DEVELOPMENT

Children's playgrounds significantly influence the development of pre-school and school children. They enrich the life of the child, develop his/her motor skills and at the same time they help to establish social contacts not only with the child's peers but also with children of different age. The child can watch and copy the older or to assist and guide the younger ones by advice - demonstration. Already for decades children's playgrounds are integral parts of towns and cities where they are used for children's leisure activities.

FUNCTION OF PLAYGROUNDS

Function of playgrounds lies also in the development of physical abilities such as endurance, effort to overcome obstacles, to match up to others and to overcome fears. They improve speed, fitness and agility. They build a positive relation to physical activities thus creating the basis for further sporting development. The formation of the healthy confidence has no less importance. Child's effort to stand out and to show off before others, or to surpass them at something, takes place within the group's physical activities.

**CHILDREN'S PLAYGROUNDS
DEFINITELY INFLUENCE THE
YOUNG BODY IN A POSITIVE
WAY.**

MATERIAL SOLUTION OF PLAY ELEMENTS

A-SHAPED ROOF

made of HPL (high-pressure laminate featuring high colour fastness, scratch resistance, UV resistance and water resistance).

BEARING STRUCTURE

made from glued prisms of 100 × 100 mm (surface treatment of the wooden parts consisting of the deep impregnation and application of three layers of coating glazing varnish according to EN 71/3 – safe for children's toys), or from structural steels 100 × 100 mm (protected against corrosion by galvanizing or duplex powder coating with coat curing). The Baby line bearing structure is made of painted aluminium profiles (80 × 80 mm).

HANDLES, SAFETY RODS

and other elements are of galvanized steel or steel with a duplex cured powder coat.

SLIDES

are made of red, yellow, green and blue fiberglass. Baby line slides are of stainless steel.

NET KNOTS

are made of aluminium or coloured polyamide of Polyfix system.

MULTI-STRAND ROPES

With steel core and polypropylene braid with diameter of 16 mm. In blue, red, yellow and green colours.

SEAT

The BABY seat is made of rubber with an aluminium insert. The frame of the NEST seat is of steel with a polypropylene rope winding. Its inside part is made of ropes with pressed aluminium sockets.

VERTICAL COLUMNS CAPS

are steel, galvanized and painted red.

All play elements are designed with regard to their long service life and resistance to vandalism. Construction requirements with respect to safety of playground equipment are specified in European standard **EN 1176**. All products meet these requirements and their compliance is assessed by an authorised person of **TÜV SÜD Czech s.r.o.** The appropriate certificate is attached to each supplied play element.

SHAPED PARTS

are milled from fully-coloured extruded polyethylene (HDPE) boards that are resistant to breakage, UV resistant and maintain their rich and bright colours.

SWING HINGES

are robust stainless steel castings fitted with bearings to facilitate movement. The hinge for the NEST version is multi-directional.

PLATFORMS

are normally made of 18-mm thick waterproof plywood for outdoor use with anti-slip finish.

SWING POSTS

are from steel profiles with hot-dip galvanized surface resulting in significantly prolonged service life.

NORMAL

NEST

BABY

ANCHORING ELEMENTS

are made of steel, hot-dip galvanized.

CONCRETE FEET

in pre-drilled holes meet requirements of the construction standard.

GRASS GRASSING PLATE

Very comfortable, easy-to-install interlocking grassing plate complying with EN 1177 for the public sector, for critical fall heights up to 3 metres. The unique interlocking grass mat is made of a very resilient, environment-friendly material containing a flame retardant, making it resistant to vandalism. It has impact-absorbent and anti-slip properties and protects the turf from pressing out. The installation does not damage the grass turf; the lawn thus grows through the mats very quickly and can be easily maintained with lawn mower.

AFTER INSTALLATION

AFTER A FEW WEEKS

GRASS IN-GROWTH

RUBBER IMPACT SURFACES

Rubber impact surfaces can also be used for specific sports places such as long jump landing pits. The standard colours are black, red and green. The products are certified for the fall of a child from 1.1 m – 2.8 m depending on the plate thickness, and cleared by the Chief Medical Officer of the Czech Republic by Decision Ref. No. HEM – 3214 – 28. 5. – 7963/96. The products were certified for fall safety (determining the critical fall height HIC according to ČSN EN 1177) at the Test Centre of ITC, a.s. in Zlín. The mats can be placed to gravel or sand surfaces. The warranty period is 24 months, if pavement placing conditions are met.

CAST RUBBER IMPACT SURFACE

The playground can be made up with different colours separating each playground sector. We can use various colour mixes from pellets of different colours that jazz up the playground with their patchwork pattern. Various flat motifs from full-colour pellets can be built in the surface. The playground surface can be 3D shaped. The wide range of colours allows creating diverse-coloured effects and stencil patterns. Unlike rubber tiles, this surface is without visible joints with a risk of tripping. The surface is monolithic. This fall-soft, anti-slip and anti-freeze surface is easy to clean, harmless to health, water permeable, resistant to common chemicals, and foreign objects are clearly visible on it. The monolithic surface repels dirt and reduces the ingrowth of weed. Children's playgrounds do not have to be flat and single-coloured. The world is colourful and plastic. The colours can be plastically shaped and combined. The colours can be dovetailed, or mixed by blending two or more colours in various ratios to form a mélange in one surface. In addition, flat patterns can be built in the surface.

PEBBLES

Impact surface of natural aggregates (2-8 mm) produced by stream gravel washing and sorting. Small, smooth and round pebbles.

IMPACT SURFACES

Newly built as well as existing playgrounds, although fitted with perfect play elements, do not guarantee safe playing without top-quality impact surfaces. Impact surfaces are designed to prevent accidents caused by a fall or hard impact from the play element. Placing the impact surface can ensure maximum safety of the game. The construction of the impact surface is not absolutely necessary for all elements we offer, if the critical drop height of the play element is less than 1 m, a well-maintained lawn is sufficient.

	MATERIAL	DESCRIPTION	MINIMUM LAYER DEPTH	MAXIMUM HEIGHT OF FALL
	Lawn	the lawn must be well maintained in order not to lose its shock absorbing properties	-	≤ 1 m
	Gravel ("pebbles")	free of silt and clay particles, granularity 2-8 mm	300 mm	≤ 2 m
			400 mm	≤ 3 m
	Sand	free of silt and clay particles, granularity 0.2-2 mm	300 mm	≤ 2 m
			400 mm	≤ 3 m
	Rubber	tiles or cast floor	According to the HIC test (see EN 1177)	critical fall height according to the test (acc. to the tile thickness)
	Grass plate	practical and money saving option, the plates are installed over lawns, underlaid with a net and locked together	23 mm	≤ 3.000 mm

Note: 100 mm is added to the minimum depth for loose fine materials to clear unevenness caused by material transfer.

PROTECTION ZONES

Ground plans
• Specify overall dimensions of play elements, surface area needed for play element assembly and impact zone areas in square metres.

CONSTRUCTION OF PLAY ELEMENTS

Play sets are offered in two versions depending on cushioning requirements for the impact surface according to ČSN EN 1177. This standard requires an impact surface with guaranteed cushioning characteristics proved by conducted tests for elements with fall heights bigger than 1 m.

Elements with fall heights up to 1 m have a tremendous advantage as they do not need an expensive impact surface made up of loose or synthetic made up of loose or synthetic materials (e.g. pebbles or rubber). A grass surface will suffice saving considerable costs.

EXPLANATORY NOTES

1.5 m 

Maximum height of fall

Defines the critical fall height according to the standard.

Steel

The base columns are of structural steel 100 × 100 mm.

Wood

The base columns are from glued prisms of 100 × 100 mm.

Aluminium

The base columns for the Baby line are of aluminium 80 × 80 mm.

GENERAL INFORMATION ABOUT PRODUCTS

Intended purpose of the equipment

- All play elements are designed in compliance with ČSN EN 1176 standard that specifies conditions for designing of children's playground equipment and their particular elements with respect to their safety operation and reduction of serious injury risk.
- Fitness machines, all workout elements and sets are designed in compliance with ČSN EN 16630 standard that specifies conditions for outdoor fitness equipment for adults which includes requirements for general safety, control, maintenance and testing methods.
- All play elements are sized with regard to their long service life and resistance to vandalism.

Materials of bearing structures

- Bearing structure is normally made from glued prisms. This solution ensures the maximum possible protection against cracks that are common for products mad from eccentric prisms.
- Metal structures are made of structural steels (metal profile of 100 × 100 mm) protected against corrosion by galvanizing or duplex powder coating with coat curing.
- Aluminium structures for Baby line are made of painted aluminium profiles (80 × 80 mm).
- The jointing material is designed with respect to maximum safety and service life.
- Anchors of the bearing elements are made of steel and hot-dip galvanized to prevent corrosion. Anchors are fixed to the play elements with bolts and their design guarantees that wooden elements are not in direct contact with the ground.

Materials of play elements

- Basic elements consist of steel pipes and profiles.
- Rope and net elements consist of ropes with multi-strand steel cores and aluminium or plastic connectors.
- Seating surfaces are made from waterproof plywood or high-quality plastic (high-pressure full-coloured polyethylene) which features high colour stability, scratch resistance, UV resistance and first of all safety as it is not fragile and pose no risk of injury caused by sharp fragments to children.

Surface treatment

- Surface treatment of wooden parts consists in deep impregnation and application of three layers of coating glazing varnish according to EN 71/3 (safe for children's toys).
- Metal elements are hot-dip galvanized or duplex powder coated with coat curing according to ISO 12944-2 to prevent corrosion. The epoxy powder prime coat containing zinc with a high crosslink density improves adhesion and prevents moisture from penetrating to the material, and the Qualicoat-certified polyester masonry paint improves UV-fastness and creates a perfect corrosion barrier. These high-tech materials achieve the highest corrosion resistance C5, and are salt-spray chamber tested according to ISO 9227 for 5000 hours.

Support and service

- As a producer of play elements we also provide spare parts deliveries and warranty and post-warranty service.
- Play elements certificates will be handed over to the customer upon payment of the last invoice for work.

NEW PRODUCTS

NEW BARRIERS

New barriers for tower sets chosen by children themselves.

FIRE TRUCK

LION JUNGLE GYM

NEW COLOUR DESIGNS FOR MERRY-GO-ROUNDS

New colour designs have been added to our offer of KO-140 and KO-180 merry-go-rounds.

SEAT

Seat Normal is now available in a stylish light green colour.

NEW FITNESS MACHINES

Fitness machines pay attention to detail and strength, and are characterised by resistance to both mechanical damaging and changing weather conditions.

NEW COLOUR DESIGNS FOR ROPE LANES

New colour designs have been added to our offer of rope lanes with the platform.

EMBEDDED TRAMPOLINE

Our existing range of trampolines has been supplemented.

INTERACTIVE PANELS

Three brand new interactive panels.

SEESAWS

Seesaws are made in combination of wood and metal or all-metal.

It is a simple type of seesaws used not only to entertain children, to contribute to the development of their strength and coordination, but first of all to develop cooperation between children and establish contacts.

The bearing structure is of machinery steel.

RECOMMENDED AGE: 2-10 YEARS

CHAIN SWINGS

We offer chain swings with wooden or metal construction.
The bearing structure is made from glued prisms or structural steel (100 x 100 mm).
You can choose from three types of seats - Normal, Nest and Baby.

The bearing structure is of machinery steel.

For element marked like this
the seat and swing joint must be purchased.

SPRING ROCKERS

Spring rockers can be placed as independent play elements to the space of children's playgrounds or places intended for children's plays and fun. The rockers are suitable also for the little ones. We offer a wide selection of children's rockers in many variations, made of high-quality materials that guarantee their long service life. Bodies of the children's spring rockers are not made of waterproof plywood but of high-quality plastic (high-pressure full-coloured polyethylene) which features high colour stability, scratch resistance, UV resistance and first of all safety as it is not fragile and pose no risk of injury caused by sharp fragments to children. the spring of these rockers is made of special spring steel with KOMAX-IT powder paint.

MERRY-GO-ROUNDS

The popularity of children's merry-go-rounds lies in their simplicity that offer their good use by children themselves. This element is not static, thus contributing more effectively to a higher degree of children's movement activity, resulting in the development of strength and also discipline and respect to others.

ROPE PYRAMIDS

Rope pyramids belong to popular play elements. In a relatively small space they can contribute to the development of gross motor skills, coordination of movements of the upper and lower extremities with necessary visual control. They help to develop skills and abilities such as keeping balance, and agility, endurance and strength training. We supply various types and sizes of rope pyramids. Your choice depends on the space available to place them properly for safe use.

The bearing structure is of machinery steel.

CLIMBING AND BALANCING ELEMENTS

Climbing elements include mainly climbing sets and climbing walls. Climbing sets support primarily the development of fitness and strength, the ability to handle motor activities in less common environment, and they stimulate children to better performance. Each element improves the child's fitness, coordination and spatial awareness. Balancing elements, as balancing beam, are very much like that, only with more emphasis on the balance development when the child surmounts his or her limits and develops other traits in this playful manner (such as endurance, responsibility, self-control, independence and ambitiousness). No matter whether the climbing pole, net, climbing wall or fitness rack are part of the climbing set, or these elements are placed individually in the area, they always develop the motor as well as psychomotor skills of the child.

BALANCING ROPE ELEMENTS

Balancing rope elements develop skills such as climbing and crawling. They support the development of balance, coordination and power skills, orientation in space, they are intended for children from 2 years of age. Individual elements can be combined and no impact surface is necessary for the heights up to 1 m, a grass surface is sufficient.

EMBEDDED TRAMPOLINES

Trampolines to the ground are essential and great looking elements of your playground. Jumping on the trampoline is very popular and widespread entertainment and at the same time a perfect tool to develop a motor activity of your child. The trampoline can be used all the year round. The jumping area and safety board are UV and weather resistant. Made from the best materials that are environment-friendly.

JUNGLE GYMS

Jungle gyms are another way to colourfully revive children's playgrounds thanks to their shapes and varied design combining plastic crawl tunnels, ropes and benches. They are a suitable complement to children's playgrounds developing children's skills such as climbing, sliding down, crawling, and they improve orientation in the limited enclosed space.

SLIDES

Slides can be located independently with a ladder or they can be parts of play sets. We offer slides in several colours (blue, yellow, red, green) and sizes.

Slides are one of the most demanded elements of children's playgrounds.

**WOOD

The bearing structure is of machinery steel.

RECOMMENDED AGE: 2-15 YEARS

Slide with a ladder KZ-100 1.5 m

Slide with a ladder KZ-100 1.0 m

ROPE LANES

Rope lanes belong to popular play elements suitable also for narrower and longer areas due to their length-to-width ratio. Rope lanes use kinetic energy when sliding so that no increased physical effort of the user is required. Children favour the unusual smooth slide from the higher part of the rope lane very much, it represents a way of moving completely different from the use of classic play elements (e.g. seesaws, merry-go-rounds).

UNIVERSAL TOWER SETS

Tower sets offer active entertainment to children while developing their basic motor skills. They can be built in all types of schools, relaxation zones, recreation areas, housing estates, outdoor swimming pools and family gardens as well. Tower sets can be arranged at investor's request with regard to the space size, age of future users etc.

Tower sets are offered in two versions depending on cushioning requirements for the impact surface. Sets with lower platform have a tremendous advantage as they do not need an expensive impact surface, the grass turf is sufficient.

The bearing structure is of machinery steel.

BABY LINE

The brand new Baby Line reflects modern trends and has a unique design. It is safe and offers active entertainment primarily to babies. The Baby Line will stand out in any nursery school or school, in pre-school centres, resorts, swimming pools or in private house gardens. With the materials used, it has an outstanding service life and needs minimum maintenance. Durable aluminium profiles are equipped with HDPE barriers. The slides are made of stainless steel and the whole set uses stainless steel jointing elements covered with caps for maximum safety. Sets with a lower platform have a tremendous advantage as they do not need an expensive impact surface, the grass turf is sufficient.

The bearing structure is of aluminium profiles.

ACCESSORIES OF CHILDREN'S PLAYGROUNDS

If you like to complete some sets or individual elements or you want to enrich yet unused space in some other manner you could do so using accessories of children's playgrounds that can enhance the overall atmosphere of playgrounds. If chosen properly, they can develop fine motor skills faster especially when the child is learning to write, count or draw, and at the same time the child can gain better ability to navigate in social relationships and roles using imitation.

WORKOUT PLAYGROUNDS

Workout playgrounds are suitable opportunity for these adults and youth who do not like gyms and prefer to stay in the fresh air as workout playgrounds are usually located in public areas. This type of activity is widespread all over the world, and the number of workout playgrounds has been growing also in Europe in recent years, thus becoming not only a trend but also a part of everyday life.

Workout principle is bodyweight exercises contributing to better physical fitness, strength improvement and endurance. However, it's not only the workout but also humbleness, moral, healthy lifestyle and making friends. Basically various exercises using parallel bars, cross bars, wall bars and other structures. Workout playgrounds combine sport and fun, keeps the youth away from drugs, alcohol and other negative influences which undoubtedly has a beneficial effect on society.
